The AMC

Luccai Dynamic European Equities Portfolio_ EUR Long Only

•Strategic partnership between the London Management Group and Luccai
•Applied to the European equity market with all large-cap stocks
•Data-driven global macro allocation across equities and currencies that will add fixed income during cycle downswings
•Proven methodology with 30+ years of history across multiple market cycles
•Daily-traded UBS Zurich with high transparency and liquidity
•Clear incentive alignment
•Designed as a dynamic core allocation with embedded risk control

Introduction

Luccai Dynamic European Equities Portfolio_ EUR is a data-driven global macro fund that dynamically shifts between holding equities during most of the global cycle and adding cash and fixed income during downturns based on advanced macroeconomic analysis and market signals.

The fund is built on an allocation process with more than three decades of documented experience across multiple market cycles. Its objective is to capture opportunities and manage risk throughout the economic cycle using an active and systematic investment methodology.

Portfolio Benefits

Luccai Dynamic European Equities Portfolio_ EUR is designed to function as a strategic core allocation in multi asset portfolios.
The fund offers dynamic exposure to equities and currencies, adding fixed income for cycle downturns based on data-driven global macro analysis, and can therefore replace or complement traditional static 60/40 solutions.

Role in the portfolio:

•Core component for long-term real returns
•Active risk management across cycles and regime shifts
•A core around which more specialized satellite exposures (illiquid assets, credit, alternative risk premia) can be built

Analysis & Data Processing

A team that has worked together since 2012

John Ricciardi

Head of Asset Allocation

John Ricciardi is one of Europe's most experienced specialists in global asset allocation, with more than 30 years of documented experience managing multi-asset portfolios. He has held senior roles such as Head of Global Asset Allocation and Lead Portfolio Manager at internationally recognized asset managers including AllianceBernstein, Iveagh, Merian, Jupiter and Deuterium. His investment framework has been tested through multiple market cycles, including periods of severe volatility, inflationary shifts and changes in monetary policy regimes.

Raphaella Ricciardi

Head of Corporate Strategy

Raphaella Ricciardi has over a decade of experience in corporate restructuring and advisory. Prior to joining Amakor Capital, she was at Skadden, where she advised creditors and companies on multi-billion-dollar restructurings across sectors including energy, aviation, and infrastructure. She has also held venture capital advisory board roles for a multi-family office and several startups. Raphaella holds a JD/MBA from Cornell, an MA from Columbia University, and a BA from the University of Pennsylvania

Investment Process

Our four-step process combines the power of large-scale quantitative analysis with portfolio manager expertise.

The process is designed to be evidence-based, systematic, objective, seamless and transparent.

1. Models

The system builds predictive macroeconomic models by analyzing the European equity and bond markets, 11 equity sectors, and fundamentals for 500+ stocks.

2. Scores

The model generates market and stock directions by scoring the European equity and bond markets, equity sectors, and 500+ stocks, aggregated with price patterns and valuations.

3. Positions

Scores are translated into positions through exposures in liquid instruments that reflect dynamic adjustments to market weights. Luccai’s allocations at certain points in the global cycle will include major positions in government bonds and cash.

4. Implementation

Positions are rebalanced monthly in the fund, ensuring that the portfolio is continuously updated with the most relevant market drivers for the coming month.

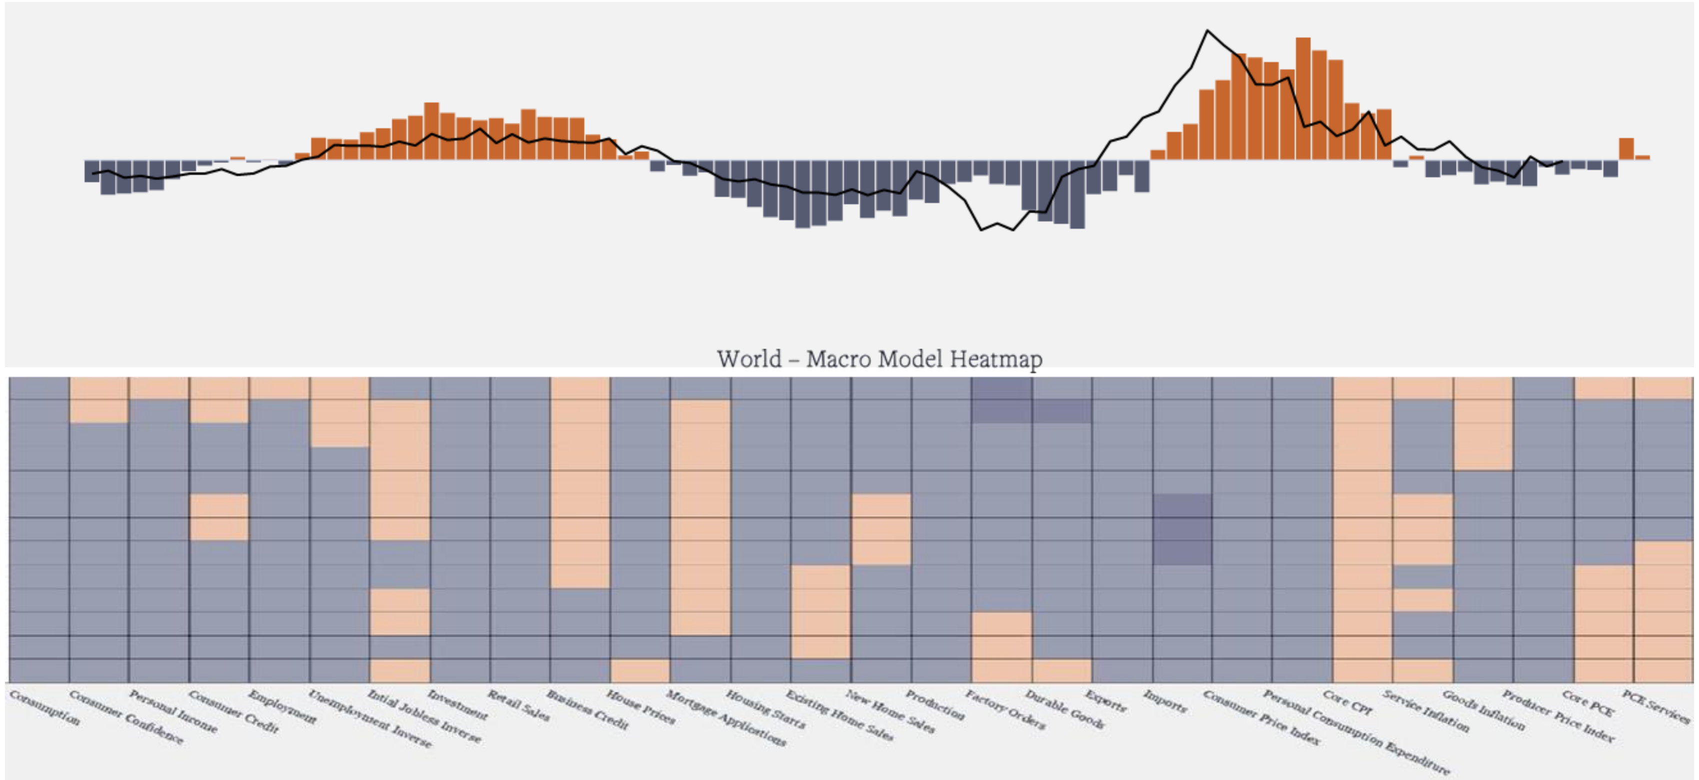
Source: Deuterium

Models

The models enable the fund to forecast macroeconomic variables and major impacts on company fundamentals several months ahead.

1. Fundamental Macro & Financial Data

- 50 million data points considered
- 800,000 data series processed
- Each data series mapped to its economic impact
- Database updated four times per hour, around the clock
- Output generated for all countries and regions



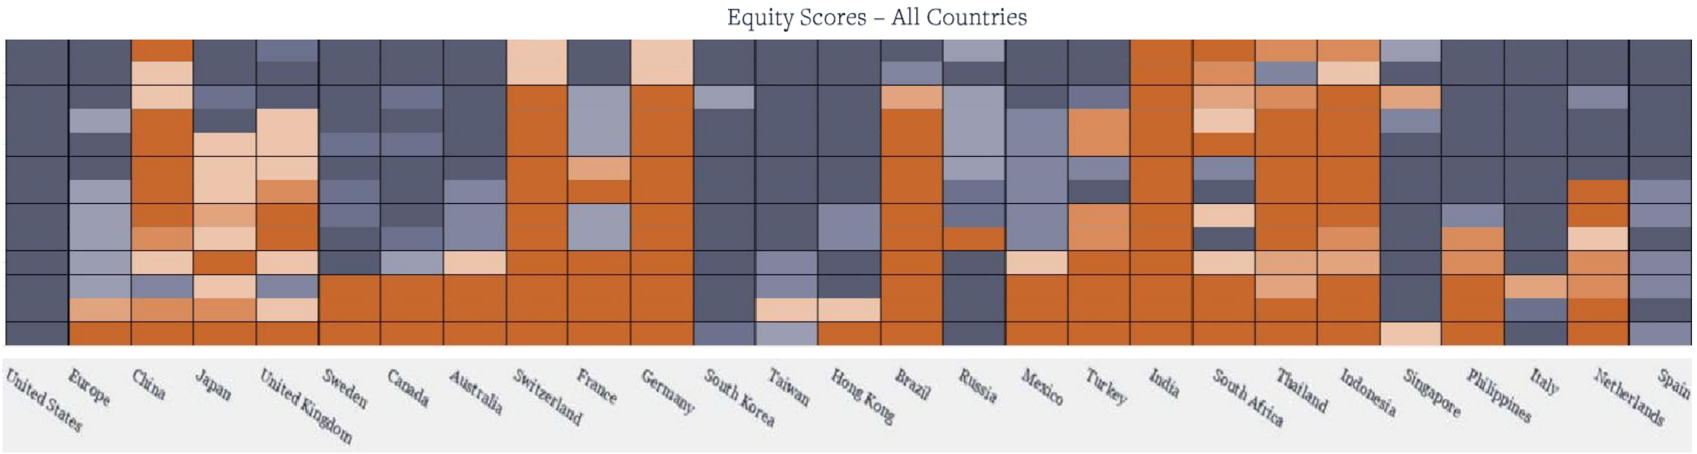
Scores

The model generates market direction by scoring European equity, curency and bond markets, equity sectors, and 500+ stocks, aggregated with price patterns and valuations.

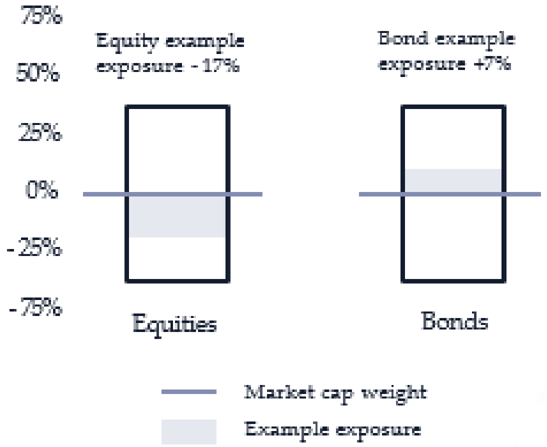
75%	12.5%	12.5%
Macro	Valuation	Prices

2. Macro models combine monetary policy, valuations and price data to create a probability forecast for European equity and bond market directions, and changes to corporate fundamentals over the next 2 to 4 months.

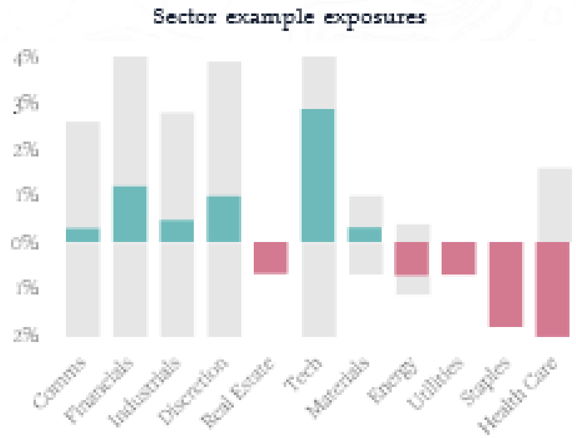
The output is presented as country-level market forecasts in the form of a heatmap showing positive and negative signals.



Positioning & Rebalancing



The weights are implemented in the fund and rebalanced monthly, adjusted for new recommendations.



3 & 4. Ongoing Portfolio Management

The system recommends weights and positions that reflect the attractiveness of the forecasts for equities, currencies and bonds, sectors and individual stock fundamentals.

Three examples of how the model captures macroeconomic shifts and translates them into asset allocations.

Case Study 1: Cut Risk Before a Bear Market (2022)

Why

Our global macro models predicted recessionary economic conditions and inflation spikes to come with the worst upside price pressures in decades.

How

Systematic quantitative signals projecting impending consumption and production contractions and monetary policy models warning of inflation surges.

What

Reduce equity and long-duration bond positions to very low levels before the 2022 bear market started and the Fed began to hike rates, then buy shares in Oct 2022.

Outcome

Major outperformance relative to comparable funds over the 12-month period through December 2022.

Value Added

Demonstrates how structured discretion layered on top of models can enhance returns during regime shifts.

Case Study 2: Performance During Covid-19 (2020)

Why

Early macro signals indicated a sharp but temporary global downturn followed by recovery.

How

Data-driven cycle models combined with real-time indicators for liquidity, monetary policy and fiscal measures.

What

Extended bond duration (100% 10-year government bond equivalent), overweight equities and concentration in technology, communications and consumer sectors.

Outcome

The fund recovered to new highs as early as September 2020 and significantly outperformed indices during extreme market stress.

Value Added

Demonstrates the fund's ability to combine model-driven discipline with rapid adaptation in crisis situations.

Case Study 3: Avoiding the 2008 Crash

Why

Macro models anticipated a deep global recession and systemic risk well ahead of the financial crisis.

How

Long-term macro modeling of global growth, credit cycles and financial imbalances.

What

Equity exposure was reduced to below 30%, with reallocation to fixed income and defensive assets.

Outcome

The fund declined by only approximately -1% during a period when MSCI World fell by more than -11%.

Value Added

Demonstrates strong capital preservation in extreme market environments — critical for pension capital.

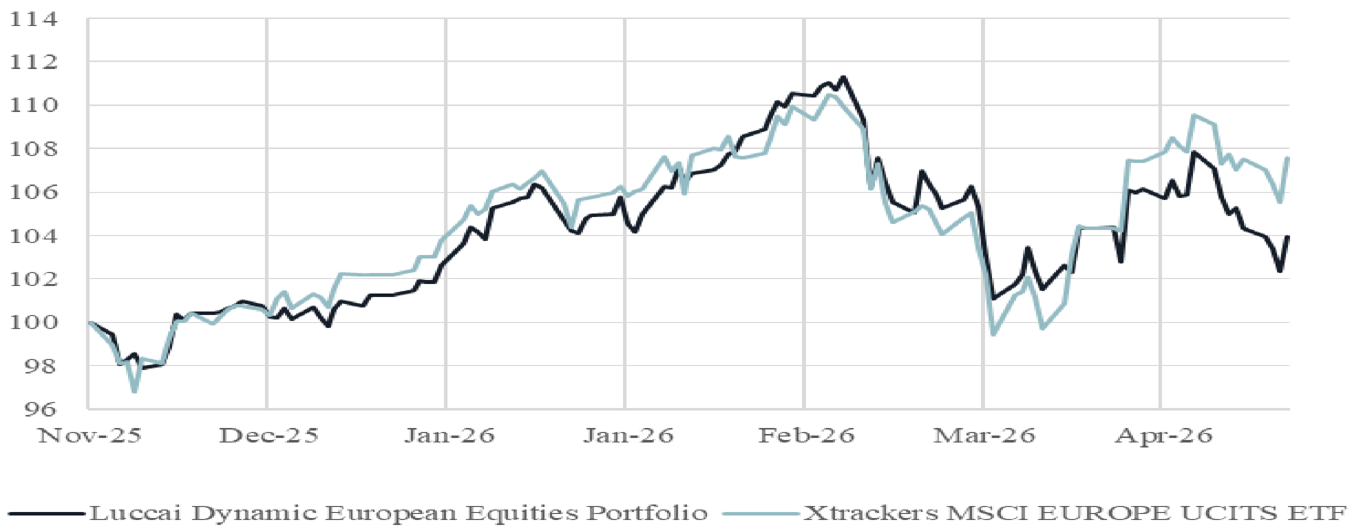
LMG_Luccai AMC Performance (net)



Past performance is not necessarily a guide to future performance..

The AMC's objective is to generate positive returns over the course of the global business cycle, which typically runs for five years, using the Luccai Investment Analytics system and its incorporated AI algorithms to inform its investment strategy.

The AMC aims to achieve its objective by allocating investments in most periods across the complete range of European equities in the major European index, using dynamic stock weightings from Luccai's AI-driven macro investment approach. AMC asset classes include European equities, sovereign bond ETFs, and cash, as Luccai's investment process at certain times in the global cycle will target lower volatility by holding allocations to major European country sovereign debt and cash.

The AMC implements dynamic weightings across the range of European equities. Its dynamic weights are taken from AI-supported models that generate the probabilities for each stock's near-term performance, measuring overall market effects, stock fundamental impacts, and equity sector influences. Luccai's long-term dynamic asset allocation model at certain points in the global cycle will include allocations to sovereign debt and cash.
